

Autonomous conversion made simple: Intelligent, Versatile and Retrofittable

With the SR-CyberHelm System, any workboat can be converted into an unmanned vessel and potentially hazardous applications or environments can now be navigated with an unmanned and autonomous vessel.

The SR-CyberHelm System is a family of systems and sub-systems that can be retrofitted to a wide variety of existing or new marine assets, transforming a vessel from manned to unmanned or autonomous operations.

SeaRobotics specializes in converting survey boats and retrofitting them for autonomous operations.

Retrofitting is also the solution to removing personal out of harms way or work that needs to be conducted in hazardous environments.
